Polen Stage3 Advanced Efficiency Aircraft Prototype Construction Begins

Granbury, Texas – August 09, 2007 – Construction of the first in a series of scaled prototypes of Polen Company's Stage3 Advanced Efficiency aircraft began this week.

The Stage3 is designed as a flying test-bed that will help Polen Company quickly test advanced airframe, propulsion and flight control technologies to increase fuel efficiency, reduce environmental impact and noise signature and enhance performance of general aviation aircraft.

Current plans call for testing of full scale Stage3 aircraft using conventional propulsion systems. The test proven airframe will later be mated with advanced propulsion technologies and control system technologies currently in development.

Polen™ Company is committed to extending the Polen Special legacy of efficiency and innovation into the 21st Century, developing efficient transportation solutions that address today's complex energy and environmental issues. Polen Company / **Efficiency On The Move™** brand partner program highlights efficiency and innovation in the development of environmentally responsible technologies for transportation.
