Polen Stage3 Advance Efficiency Aircraft Flying Test-Platform

Granbury, Texas – October 27, 2007 – Responding to inquiries about production of their Stage3 Advanced Efficiency aircraft, Polen company officials want to clarify the purpose of the Stage3 development project.

“The Stage3 aircraft program is not designed to produce a specific aircraft for immediate market. Stage3 will provide a system to test evolving airframe, propulsion and flight control technologies key to the next generation of fuel efficient, environmentally responsible, quiet and safe air transportation” said Polen Company officials. “If a marketable design emerges, of course we will be very pleased.”

“We need to be able to quickly understand and compare what works and what doesn’t in order to nurture workable technologies and develop business models for the next generation of enviro-ficient aircraft. Stage3 will give us the tools to understand and refine both the technologies and economics for these critical transportation, environmental and business decisions.”

Stage3 focuses on advanced technologies that will be first applied to smaller general aviation aircraft, moving progressively into business class aircraft and larger, heavier aircraft as the technologies and business models evolve.

Polen™ Company is committed to extending the Polen Company legacy of efficiency and innovation into the 21st Century, developing efficient transportation solutions that address today’s complex energy and environmental issues. Polen Company / **Efficiency On The Move™** brand partner program highlights efficiency and innovation in the development of environmentally responsible transportation technologies.
