Polen Stage3 Advanced Efficiency Aircraft Prototypes Fly

Granbury, Texas – November 15, 2007 – Over the past three weeks, two radio-controlled scale prototypes of Polen Company’s Stage3 – advanced efficiency aircraft have logged more than a dozen test flights.

“The initial flights confirmed a number of aerodynamic assumptions about the radical new design, but also pointed out several areas where more work is needed. We are very pleased with what we learned from these flights and are planning another series of tests as soon as we have applied what we learned. The learning curve is quite steep but is moving at a good pace,” said company officials.

The Stage3 is designed as a flying test-platform to help Polen Company quickly test advanced airframe, propulsion and flight control technologies to increase operating efficiency, reduce environmental impact and enhance aircraft performance.

Polen™ Company is committed to extending the Polen Special legacy of efficiency and innovation into the 21st Century, developing efficient transportation solutions that address today’s complex energy and environmental issues. Polen Company / **Efficiency On The Move™** brand partner program highlights efficiency and innovation in the development of environmentally responsible technologies for transportation.
